## AMENDMENTS TO THE SPECIFICATION

**Please amend the following subtitle and paragraph [0007] as follows.**

### SUMMARY OF CERTAIN ASPECTS OF THE INVENTION

[0007] One aspect of the ~~The present~~ invention provides a system for constructing and processing behavioural profiles that are well suited to fraud detection that is highly flexible, and can be configured without requiring changes to the underlying software engine.

**Please amend the abstract as follows.**

In one embodiment, a method of configurably profiling data uses system (10) comprising a pre-processor (16), a profiler (18), a post-processor (20) and database (24). The pre-processor receives data and feedback data and performs configurable first calculations thereon to create data relating to profiling features. The profiler summarises the profiling features data over a length of time by performing configurable second calculations thereon to create summarised data relating to profiled features. The post-processor performs configurable third calculations the profiled features data to create the feedback data (22) and a profiled output data stream (14) for further processing.
